

MAQUET CRITICAL CARE INTRODUCES TWO NEW MCARE WORLD WIDE SERVICES CONCEPTS

MCare Portal and MCare Remote Services Streamline Service, Uptime and Learning

Düsseldorf, Germany MEDICA, (Halle 12 Stand 51/52) November 19-22, 2008 — MAQUET Critical Care today announced the introduction of two new MCare Services components called MCare Portal and MCare Remote Services. The two new components will enhance the current MAQUET MCare world wide services to offer even more flexibility through its high quality services.

MCare Portal is a customized platform for hospitals, giving access to installed base information, latest news, training material, extensive product information, and an interface to e-learning.

"MCare Portal is an innovative and user-friendly tool, which promotes enhanced knowledge and training services," said Dan Rydberg, Managing Director, MAQUET Critical Care. "It is of the greatest importance that we can provide a high standard of training and development across the medical staff."

MCare Remote Services is a diagnostic solution for SERVO-i and SERVO-s users that provides a direct link to MAQUET's system and technical experts. MAQUET's experts can through MCare Remote Services begin to analyze the logs from the unit and solve the problem faster remotely, thereby maximizing the unit's uptime and reducing the need for travel.

"MAQUET Critical Care is excited to be able to offer a solution that is environmentally friendly by cutting the need for travel," said Rydberg. "Not only does MCare Remote Services provide environmental benefits but it also increases the uptime for units in the hospitals, leaving medical staff to focus on its patients."

About MCare Portal:

It offers access to all documentation needed throughout the lifecycle of the product such as user and service documentation, training schedules and recorded symposia as well as the installed base information. Furthermore, MCare Portal provides an interface to e-learning, available 24/7, which ensures competence building. It also provides an interface to MCare Remote Services.

About MCare Remote Services:

It offers quick response time and maximized uptime through a direct link to MAQUET's technical staff that enables them to start troubleshooting immediately. MCare Remote Services works through the existing network's security tools. SERVO-i and SERVO-s ventilators are using a direct path to communicate with MCare Remote Services. No prior IT configuration is needed.
